Horizon Prefilled Saline Flush Syringes

When it comes to critical situations, the stakes are high. That's why we offer prefilled saline flush syringes designed to ensure optimal and safe flushing of IV catheters. We understand the importance of maintaining the integrity of intravenous access, and our prefilled normal saline syringe is specifically crafted to meet those needs. With our iso prefille syringe, healthcare professionals can have confidence in their ability to perform effective and secure catheter flushing, promoting patient safety and well-being.

Crafted for your convenience,

Horizon offers two options and four sizes to suit your needs:

Horizon IS: Designed with a sterile fluid path exclusively.

Horizon ES: Externally sterile and suitable for use in sterile fields.

We understand the importance of flexibility and adaptability in clinical settings. That's why we provide both options to cater to different preferences and requirements. Whether you require a syringe with a sterile fluid path or one that is externally sterile for use in sterile fields, Horizon has you covered. Choose the option that best aligns with your practice and enjoy the convenience and reliability our syringes bring to your healthcare procedures.

Engineered to enhance patient outcomes

Horizon introduces the Luer-Lock Tip Cap, designed with a tighter seal to ensure closure integrity and prevent the risk of touch contamination. We understand the critical importance of maintaining a sterile environment, and our innovative Luer-Lock Tip Cap provides an added layer of protection. With its advanced design, healthcare professionals can confidently safeguard against potential contaminants, promoting safer and more successful patient outcomes.

Clear labeling plays a crucial role in mitigating the risk of medication errors

At Horizon, we prioritize patient safety, which is why our syringes feature easily identifiable contents and bold print for enhanced clarity. Our commitment to providing clear and precise labeling empowers healthcare professionals to accurately identify the contents of each syringe, minimizing the potential for mistakes and ensuring the safe administration of medications. With Horizon syringes, you can trust that important information is readily available and easily discernible, contributing to a safer healthcare environment.

Utilization of a standard 10 mL syringe diameter with Horizon helps mitigate the risk of cannula damage

By employing this larger diameter, our luer jet luer lock prefilled syringe generates significantly lower pressure (measured in PSI) when compared to standard 3 mL syringes. This reduction in pressure contributes to safer procedures, minimizing the potential for harm to the cannula. With Horizon, healthcare professionals can have confidence in their ability to provide care while prioritizing patient safety.

What is the benefit of a prefilled syring ?

Improves clinical practice by:

☑ Offering a ready-to-administer medical device that eliminates the need for additional manipulation by clinicians.

☑ Eliminating the requirement for needles, glass vials, and ampoules.

☑ Streamlining the process of preparing a flush syringe, reducing the number of steps involved and saving valuable time.

☑ Enhancing efficiency in healthcare settings, allowing clinicians to focus more on patient care and less on preparation tasks.

With Horizon, healthcare professionals can rely on a convenient solution that simplifies their workflow, reduces the risk of errors, and promotes greater efficiency in clinical practice. By eliminating the need for additional steps and supplies, Horizon empowers clinicians to deliver optimal care while saving valuable time and resources.

The compact profile of our syringes not only saves space but also reduces waste and costs. By opting for smaller size syringes such as 3 mL or 5 mL, specifically for peripheral lines, several benefits can be realized:

☑ Decreased storage and disposal costs.

☑ Minimized environmental waste, contributing to sustainability efforts.

☑ Extended shelf life of 3 years, ensuring product longevity and reducing the need for frequent replacements.

Ensuring patient safety through manufacturing excellence:

By employing a fully automated production process from start to finish, we minimize interruptions caused by supply chain issues and maintain complete control over every aspect of pre-filled syringe production. This enables us to uphold the highest standards in the following areas:

☑ Quality of raw materials used.

☑ Optimization of syringe design specifically for flushing purposes.

☑ Determination and maintenance of shelf-life.

☑ Production of sterile saline solution.

At Horizon, we prioritize patient safety by adhering to stringent manufacturing practices. Our commitment to a seamless and automated production process guarantees the utmost quality and control at every stage. This dedication allows us to deliver pre-filled syringes that meet the highest standards, ensuring the safety and well-being of patients.
